An issue of svld1_f64() and svld1_vnum_f64() in gcc10 with '-O0'

Recently I found an issue of SVE intrinsics (svld1_f64) when using gcc -O0 (optimization level 0). svld1_f64() is a function defined in Arm intrinsics for SVE (scalable vector extensions).

Changing -O0 to -O1 makes the issue disappear.

svld1_vnum_f64() has the same problem.

Code to show the issue:

Download the test source from here:
https://github.com/docularxu/sve-code-test/tree/working-svld1_f64 . And README for how to compile.

Expected vs. Actual:

In green, it is the expected result.
In red, it is the actual result when compiling with 'gcc -O0'.

```
docularxu@4c78a265f31e:~/sve-code-test.git$ make clean; OPTS=-O1 make;
qemu-aarch64 -cpu max,sve256=on ./test1
rm -f *.o *.os test1
gcc -c -o test1.o test1.c -O1 -I. -march=armv8.2-a+sve
gcc -o test1 test1.o -O1 -I. -march=armv8.2-a+sve
hello world
